Research Document

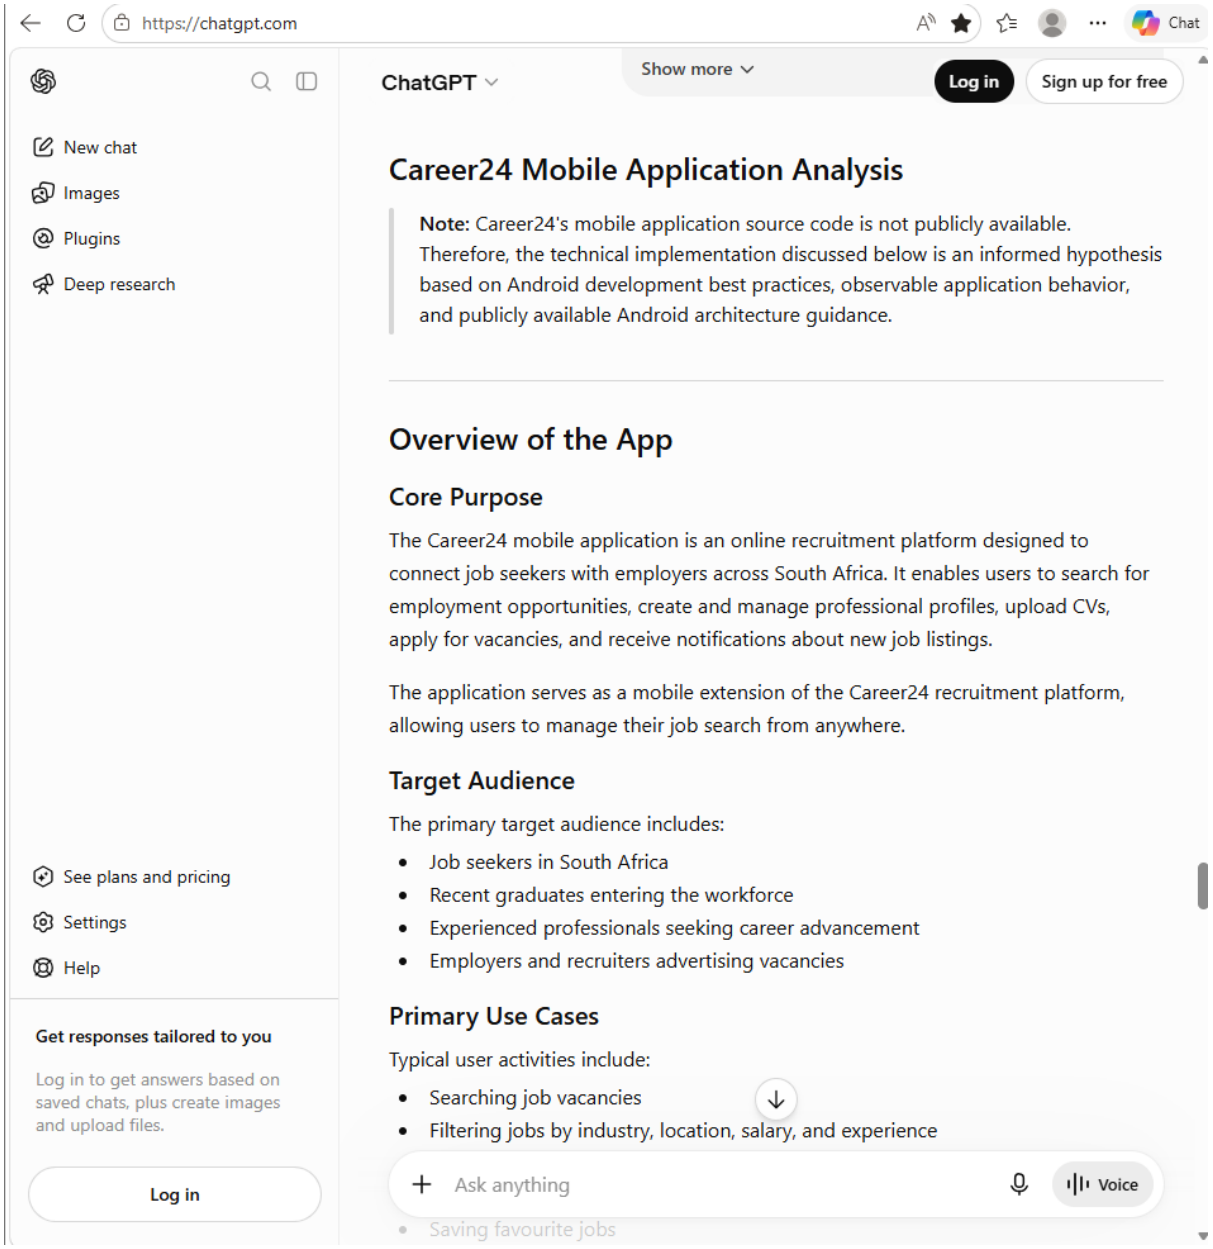

By ST10258513 Clifford Naude

For the comparative application section where I investigated the three different applications that are like our own application. I used ChatGPT to help me figure out on how these applications were made and their designs in the backend. I used normal websites for the rest of the section but used AI to guide me to the correct websites for figuring out on how to identify the architecture used for these applications since their source code is not publicly available. I cited the references provided by the AI as I used these documents to do my research. This helped on my format and on how I wrote my analysis. I used it to figure out on how to clone git hub and to publish the api to azure using terminal as I do forget sometimes. AI was used for troubleshooting errors like for when a firebase admin sdk file was missing and we couldn't figure out why the application wasn't running.

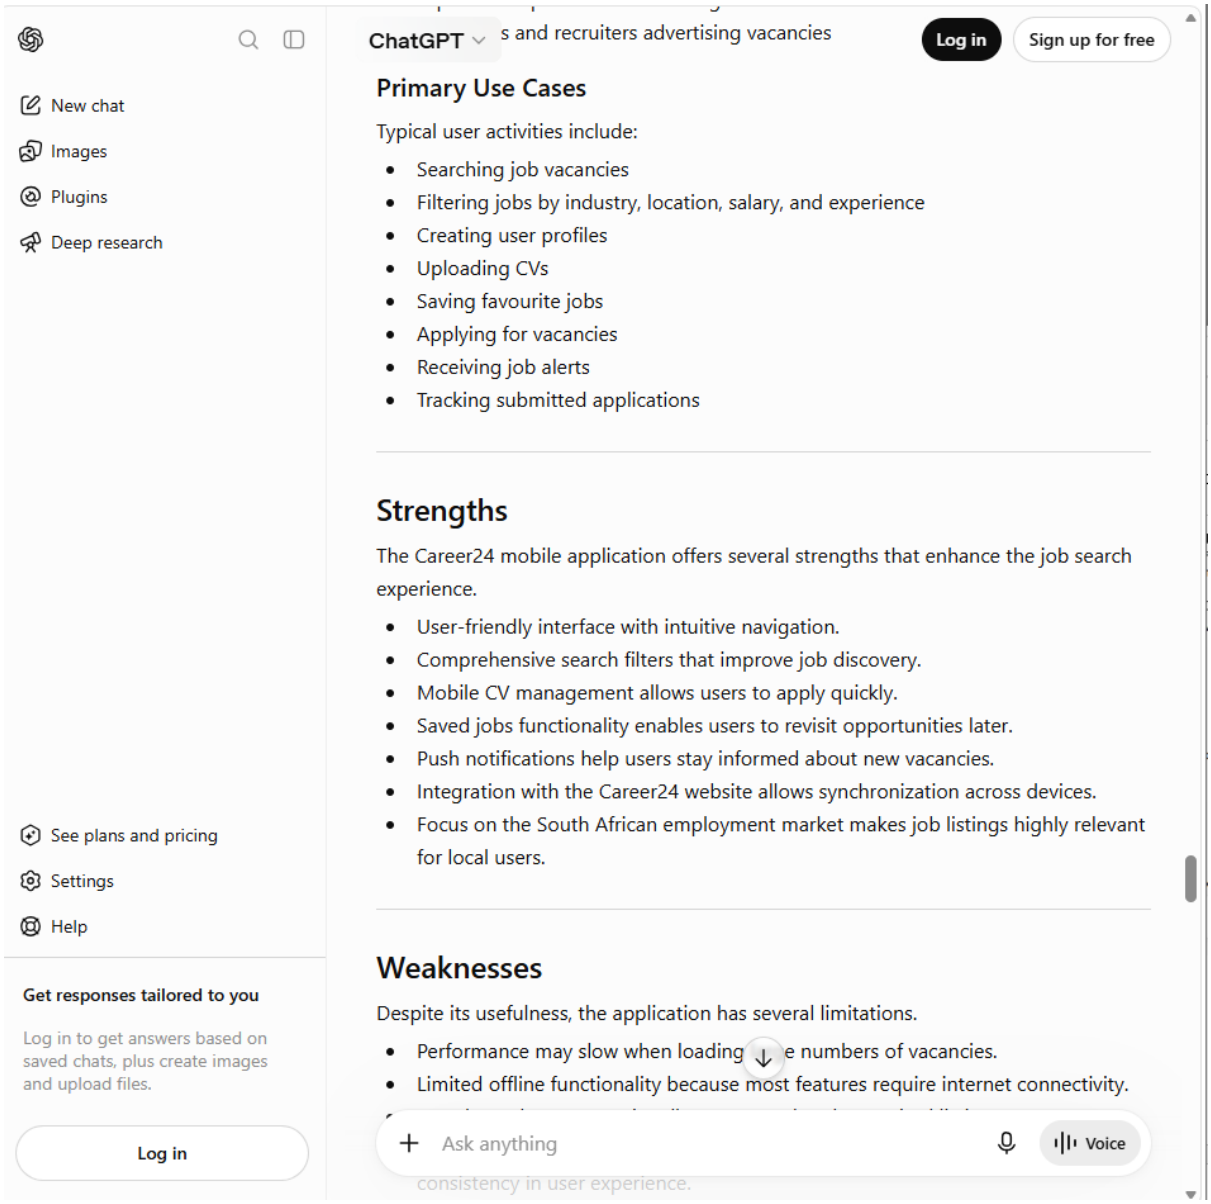

By ST10437348 Alex Ornelas

AI was used for instructions on setting up the push notifications. Also, for instructions for the signed apk. We used AI to help us start our work and to brainstorm a bit to figure out on what's the best approach for the task at hand. We use it to give us a peace of mind that we are doing the correct approach and to prevent us from redoing our work.
